

Slideway Oil

High quality lubricant for slideways of CNC Machine Tools, it has a high level of anti-friction additive that prevents stick-slip and friction on slideways to improve efficiency.

Slideway ISO BL 32, 46, 68

is designed for use in CNC machine tools which require smooth movement of roller guide, machine base XYZ axis, slideway systems in industrial plant. Recirculating ball slider and plane bearing slider require zero lash operation and low stick slip force.

These slideway have no negative effects on seals, wipers and splash shields used commonly in automated cutting operations.

We are accepted by CNC machine tool builders in Asia, Europe and USA.
