

Uni Clean

For every industrial cleaning operation but safe for the most plastics and machine coatings

Before

After

Special cleaning requirements for CNC machine, tools, engine rooms and factory areas are addressed by the UNI CLEAN product line. This environmentally friendly cleaning agent is based on a glycol ether agent that is free of phosphates and borate builders. It is safe to use on machine tools and most plastics with a biodegradable formulation that can be sent to public owned waste water facility with out issues. Effective at removing even hardened stains and grease.
